XAMPP Apache + MariaDB + PHP + Perl

Welcome to XAMPP for Windows 8.0.30

You have successfully installed XAMPP on this system! Now you can start using Apache, MariaDB, PHP and other components. You can find more info in the [FAQs](#) section or check the [HOW-TO Guides](#) for getting started with PHP applications.

XAMPP is meant only for development purposes. It has certain configuration settings that make it easy to develop locally but that are insecure if you want to have your installation accessible to others.

Start the XAMPP Control Panel to check the server status.

Community

XAMPP has been around for more than 10 years – there is a huge community behind it. You can get involved by joining our [Forums](#), liking us on [Facebook](#), or following our exploits on [Twitter](#).

Simple PHP code displaying PHP version

<http://localhost/version.php>

The screenshot displays a web browser window at the top and a Windows File Explorer window at the bottom. The browser window shows the output of a PHP script, which is the PHP version information. The File Explorer window shows the source code of the script, which is a simple PHP code snippet that calls the `phpinfo()` function.
